

6th Grade

Earth Science - S6E3

- View and learn about the biodiversity and various fish found in Rome's rivers
- Use the wetlands to discuss the role of water in recharging groundwater, storing water during flood events, etc.
- Participate in an activity that demonstrates the various forms that water takes and how it cycles

Earth Science - S6E6

- Discuss wildlife as a natural resource and how biologists use conservation practices to protect species and habitat
- Use Rome's rivers as an example of a renewable resource (and what sustainability practices are used)
- Teach specific cause and effect relationships between humans and natural resources
